

square knot technique

This knot is used to end pieces strung on stretchy cord.

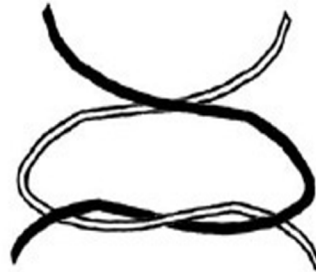

1. Cross the string on the left over the string on the right.

2. Bring the left-hand string around and under the right-hand string. This is like the first step for tying a shoe.

3. Pull on the string to get more cord to work with. Cross the string now on the right side over the left-hand string.

4. Bring the right-hand string around and under the left-hand string.

5. Pull the ends tight. Put a drop of super glue on the knot and snip off extra cord.
